

ScopedFakeTestPartResult
Reporter

```
classDiagram
    class ScopedFakeTestPartResultReporter
    class GTestDummyResultReporter {
        +GTestDummyResultReporter()
        +ReportTestPartResult()
    }
    GTestDummyResultReporter --|> ScopedFakeTestPartResultReporter
```

The diagram shows two classes. The top class, 'ScopedFakeTestPartResultReporter', is represented by a white box with a thin black border and is divided into three horizontal sections. The bottom class, 'GTestDummyResultReporter', is represented by a gray box with a thick black border and is divided into three horizontal sections. The top section of the gray box contains the class name. The bottom section contains two public methods: '+ GTestDummyResultReporter()' and '+ ReportTestPartResult()'. A blue arrow with an open triangular head points from the top section of the gray box to the bottom section of the white box, indicating that 'GTestDummyResultReporter' inherits from 'ScopedFakeTestPartResultReporter'.

GTestDummyResultReporter

+ GTestDummyResultReporter()
+ ReportTestPartResult()
